Art Unit: 1614

Claims 12, 17, and 21-29 are presented for examination.

Claims 24-26 are withdrawn from examination. Such claims introduce additional elements, and if they were submitted originally, they would have been subjected to a restriction requirement.

Claim 12, 17, 21-23, and 27-29 are rejected under 35 U.S.C. 103 as being unpatentable over Vrijisen et al. for the reasons set forth on page 4 of the office action of March 18, 2003 and Applicant's admission for the following reasons.

Applicant on page 2 lines 29-32 of the specification admits that flavones contribute to the maintenance of the concentrations of ascorbate in different organs. The above reference makes clear that flavones maintain and increase the lifetime of ascorbate in the body. The primary reference differs from the claimed invention in using flavons to maintain the biological activity of ascorbate. It would have been obvious to a person skilled in the art to incorporate such teachings into the primary reference, considering that the secondary reference teaches the effect of flavones in maintaining the ascorbate concentrations in the tissues.

One skilled in the art would have been motivated to combine the teachings of the above references, since one relates to the effect of ascorbate in extending the biological activity of flavones and the other relates to the effect of flavones in maintaining the biological activity of ascorbate. The determination of optimum proportions or amounts are considered to be within the skill of artisan in the absence of evidence to the contrary. Applicant has presented no evidence to establish the

unexpected or unobvious nature of the claimed invention, and as such, claims 12, 17, 21-23 and 28-29 are properly rejected under 35 U.S.C. 103.
